PROFESSIONAL SUMMARY

As a Software Engineering professional, I possess the ability to program in different languages, conduct data analysis, operate systems and networks, and manage databases. I have skills in Java, Python, HTML & CSS, and SQL, and excel in teamwork, problem-solving, and communication. I am eager to pursue a career in a challenging workplace that welcomes innovative ideas and where I can contribute to the growth and expansion of the organization.

EDUCATION

University Of Samsun
Bachelor's Degree in Software
Engineering 2021-2025

TECHNICAL AND SOFT SKILLS

Programming Languages: C, C#,Java,JavaScript, Python, PHP, Dart
experience in working with the Kali Linux operating system. Ability to work independently and as part of a team

Creativity skills: Being able to handle new technologies effectively. Adaptability and Quick Learning

EXPERIENCE

Atakum Municipality Information Technology Department | (Jul 2023 - Aug 2023)

learned to set up and maintain computer networks, and gained a solid understanding of networking basics and protocols.

Provided efficient technical support to users and promptly resolved their technical issues.

I understood the importance of ethics in IT and how to handle data and information responsibly.

I have a deeper knowledge of information security and how to protect systems and data

AppTech System Company Software Department (Jul 2024 - Aug 2024)

During my internship at AppTech System Company, I engaged in various software development projects and contributed to the creation of innovative software solutions. I collaborated closely with team members to design, develop, and implement software applications, enhancing my coding skills and gaining practical experience in the software development process. This experience allowed me to deepen my understanding of software engineering principles and practices

Projects

E-commerce Website

Developed a fully functional e-commerce website using HTML, CSS, JavaScript, and PHP. Implemented secure payment gateways and user authentication. Collaboratively designed and built the website with a team.

PieTopia Food Delivery System

Created a food ordering system allowing users to order food by scanning a QR code, which directs them to the system where they can place their orders without calling a waiter, and the table number is recorded in the system.

My Hairdresser Mobile Application

Designed and developed a hair salon booking application using Flutter, allowing users to book appointments at specific times, which are stored in the database and displayed on an admin panel.

Parkour Game

Developed an open-world parkour game with a large map and varying difficulties using Unity. The game does not have a point collection or level system but features an open-world environment.

Courses

- Introduction to Cybersecurity | Cisco Networking Academy
- Introduction to Cybersecurity | Gelecegi Yazanlar
- Basic Linux 101, 201, 301, 401 | Gelecegi Yazanlar
- Introduction to Web Services | BTK Academy
- Version Control: Git and GitHub | BTK Academy
- Web Development with HTML5 | BTK Academy

Languages

- Arabic: Native
- English: Intermediate
- Turkish: Advanced
